

Thanks for getting the Booking Bot & Automation Kit

How to use this guide

This PDF is a roadmap, not a separate tutorial.

1. Start with the Tango tutorial (link below) and follow it step-by-step.
2. Use this PDF as a summary + checklist of everything you'll set up in the tutorial.
3. Don't worry if some steps look repeated here – you'll actually do the actions only once, inside the Tango tutorial.

Quick Start Overview

You'll use these 4 key elements:

1) Tango Step-by-Step Tutorial

This guide shows every step:

- Creating your Make account
- Importing the Make blueprints
- Connecting Botpress → Make → Google Sheets
- Testing the whole booking flow

👉 Tutorial link:

<https://app.tango.us/app/workflow/Build-a-Booking-Automation--Botpress---Make---Google-Sheets--cb93938a6cb54a3aa0d96d0a5e9f8e44>

- ♦ Do the real setup inside this Tango tutorial.

This PDF is just here to remind you what each part does.

2) Import the Botpress flows (.bpz)

From your Payhip download:

- File name: **Botpress Flows- 2025 Dec 12.bpz**

In Botpress (as shown in the Tango tutorial), you will:

- Go to your workspace / Studio
- Click Import, choose the **.bpz** file
- Customize services, texts, and languages (EN / FR / AR)

3) Copy the Google Sheets template

This sheet stores:

- Available slots
- Services & durations
- All confirmed bookings + client info

👉 Copy link:

<https://docs.google.com/spreadsheets/d/1CmVA93MOqGIT3CDuyo8IgU39gNW6lazSoywr500MmqE/copy>

Steps (you'll also see this in the tutorial):

- Open the link
- Click "Make a copy" → it's now in your own Google Drive

- You'll connect this sheet to Make during the tutorial

4) Import the Make blueprints (.json)

From your Payhip download:

1. Get available time slots from Google Sheets.json
2. Save confirmed booking to Google Sheets.json

In Make (the Tango tutorial shows this):

- Create a scenario from blueprint and import file 1
- Create another scenario from blueprint and import file 2
- Update the connections (Webhook + Google Sheets) as shown in the tutorial
- Turn both scenarios ON

Result

Once everything is connected:

- Scenario 1 sends only free time slots to Botpress
- Scenario 2 saves confirmed bookings + client details into Google Sheets

Checklist

After following the Tango tutorial, make sure you have:

- Opened the Tango tutorial and followed it to the end
- Imported the Botpress .bpz file
- Made a copy of the Google Sheets template
- Imported both Make .json blueprints
- Connected everything & tested at least one full booking
